

# IMPERVIUS™ Lead-Lined Plywood

## Lead-lined and custom sized to fit any design.

Every sheet of NELCO plywood is laminated with defect-free lead to ensure shielding in PET/CT, HDR, diagnostic, therapeutic, and industrial modalities.

For use in either new construction or shielding upgrades, NELCO lead-lined plywood products are designed to fill the gaps between lead-lined gypsum wallboard and interlocking lead brick. Panels come in standard sizes, or can be cut to your specifications and uniformly lined with lead of a specified thickness. To prevent leakage, lead batten of equal thickness is supplied. NELCO experts will help determine your optimal size, thickness, and wall layout.

Safety  
for  
life
